

## Wikipedia API Client

Build a basic Wikipedia article viewer web application that allows a user to view random article extracts. Follow the requirements to the best of your ability. Your app will be judged not only by the effectiveness and efficiency of your programatic solution, but on the overall experience the app provides.

When completed, deploy your app and send us a link to the live app as well as a public GitHub repo containing the source code.

### Requirements

- Consume wikipedia's restful JSON API
- View random article - 1st paragraph only
- Refresh or select a new random article
- Single-page application
- No page refresh required to update API data
- Completely client side application (should not rely on any server side system/data source other than wikipedia's API)

### Technology Suggestions

- jQuery
- HTML5
- CSS3
- UI Framework (Bootstrap/Foundation/...)

### Functionality

#### Suggestions (Not requirements)

- Choose number of articles displayed
- Usable on mobile and laptop/desktop, IE10+ (Responsive and Cross Browser)
- Ignore user chatter/talk (check out namespaces in the API)
- Link to main article
- Filter articles based on word list (specifically for explicit content/words)
- Limit by user specified category
- Anything else that would make a cool/useful feature
